

## 4G Display v684C Release

PSI has released 4G Display version 684C. You can download the updated version at [www.psiengines.com/software](http://www.psiengines.com/software)

**Important:** All current and legacy 4G EDIS passwords continue to work exactly as they do today.

### 4G EDIS Password Update 2026

**What is changing:** Two password types are now used:

#### 1. Service Flag Passwords

- These are intended for normal service and diagnostics.
- Read only access
- No calibration changes or downloads
- Simplified pages for diagnostics

##### Available levels

- **Service Tool SuperTech:** All diagnostic tests and clear adaptives
- **Service Tool Tech:** Spark kill, DBW test, clear adaptives
- **Service Tool Faults Only:** Compression testing only

##### Limitations

- No road speed programming
- Calibration tools remain restricted
- Service Flag passwords still work on older EDIS versions at their original access levels

#### 2. Calibration Passwords

- These protect PSI calibration files.
- Each calibration has a unique password
- Prevents saving full calibrations or opening files in spreadsheets
- Protects PSI calibration IP
- Single Serial Number access still allows saving a calibration from the ECM and programming the unit. Opening that file later still requires the calibration password

##### What to do if you encounter a calibration password?

If you encounter this contact PSI Technical support at [service@psiengines.com](mailto:service@psiengines.com). PSI Technical support will evaluate the situation and contact PSI calibration team for next steps when applicable.
